

Leveraging AI & Genetic Testing for the Ultimate Risk Assessment with Beth Parkes

**Monday, June 16, 2025
7-8:30pm MST**

Join Beth Parkes to explore how artificial intelligence is transforming dentistry by enhancing diagnostic capabilities, improving treatment planning and streamlining office processes, leading to more efficient and accurate patient care.

We will also examine how AI is revolutionizing the integration of genetics into oral health risk assessment protocols. Focusing on genetic testing, we will explore the scientific principles behind these advancements and how they enable precise, objective risk assessments for dental conditions. By understanding genetic profiles, we can more accurately evaluate individual patient risks for dental diseases, including caries and periodontal disease.

With this knowledge, we can guide customized treatment planning and the strategic use of adjunctive therapies to ensure optimal health outcomes.
