

# Advanced Implant Maintenance for Hygienists

From Routine Care to Managing Peri-Implant Diseases

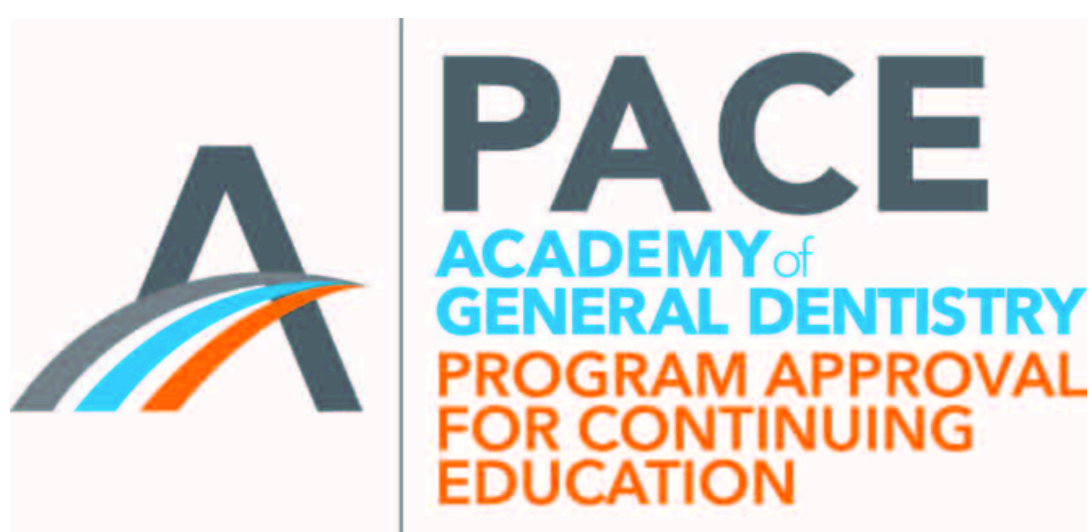

Elevate your skills in this targeted webinar for dental hygienists! Master routine implant care—assessments, safe instrumentation (scalers, ultrasonics, air polishers), radiographic protocols, and monitoring for every visit.

Explore peri-implant diseases: prevalence, risk factors, and differentiation between mucositis and peri-implantitis for early detection. Gain practical strategies for disease management, adjunctive therapies, and referral guidelines—empowering you to deliver proactive, evidence-based care and outstanding long-term implant success!

## Objectives

- Perform routine implant assessments, including clinical evaluations and radiographic interpretation, to monitor health during maintenance visits.
- Identify risk factors, prevalence, and diagnostic criteria for mucositis and peri-implantitis to enable early intervention.
- Select appropriate instruments and techniques for safe implant maintenance and debridement based on the latest evidence.
- Evaluate treatment options, adjunctive therapies, and referral criteria when peri-implant disease is detected to optimize patient outcomes.
